

# INFENER

## We decentralise energy

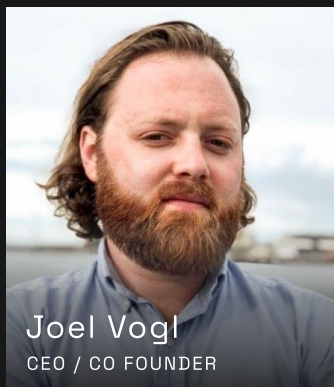

INFENER AG is a pioneer in green hydrogen technology and integrated solutions to supply industry, mobility and communities with green hydrogen.

INFENER AG was founded in 2023 and is headquartered in Switzerland with branches in Germany and Norway. The company is dedicated to transforming the energy landscape and catalysing the growth of the green hydrogen economy. Green hydrogen stands as the centrepiece of our energy future, offering a game-changing solution to the global energy challenges.

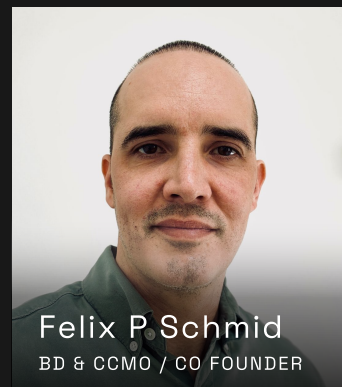

By unlocking the potential of storing green energy, increasing the resilience of renewables, serving as a highly potent energy carrier and offering a solution for future refuelling infrastructures, green hydrogen paves the way to a carbon-neutral world.

BOARD MEMBER / CO FOUNDER

Pius Huwiler  
BOARD MEMBER / CO FOUNDER

# INFENER Solutions

INFENER is developing green hydrogen hubs, integrated system solutions, and groundbreaking products powered by renewables.

The company has just launched its first 50 MW hub in northern Germany, in partnership with Hadi Teherani Architects / Solar. This marks the beginning of it's expansion across Europe, as INFENER aims to play a pivotal role in reducing carbon emissions and supporting the EU's hydrogen strategy.

Our flagship H<sub>2</sub> product, the "ECORE ONE" - a reliable, year-round energy supply solution for buildings powered entirely by renewables will be first presented at the Intersolar Europe exhibition in Munich from the 19th-21st of June 2024.

## Green H<sub>2</sub> Hubs

We initiate, invest, develop, and operate green hydrogen hubs to supply and decarbonise industry, mobility and communities.

## Integrated solutions

Transform your building and business through a decentralised system solution that centres around green hydrogen, to become self-sufficient and achieving net-zero.

## Product development

Our H<sub>2</sub> plug-and-play products are developed to empower individuals and businesses on their journey to energy self-sufficiency and net zero.

## Infener finance

We finance Green H<sub>2</sub> Hubs and offer leasing and contracting options for our projects and products to accelerate the energy transition and develop new business models and markets.

*Our journey to a gigawatt scale for 2030:*

**+100 Hub developments with a total capacity of +10-15 GW in Europe**
